

# Notation Basics: Stems & Ties, Beams, Accidentals

## Stems & Ties

The image displays ten numbered musical examples on a single staff, illustrating various stem notation rules. Examples 1-3 show single notes with stems of different lengths and directions. Examples 4-7 show chords with stems of different directions and lengths. Examples 8-10 show notes with ties and stems of different lengths and directions.

1. STEM LENGTH: one octave.
2. STEM LENGTH WITH LEGER LINES: When a note extends beyond one leger line, the stem must touch the middle staff line.
3. STEM DIRECTION
  - a. For notes *above the middle staff line*, the stem is down.
  - b. For notes *below the middle staff line*, the stem is up.
  - c. For notes *on the middle staff line*, the stem can be up or down according to the context of the notes around it.
  - d. When two notes are an *equal distance from the middle line*, the preferred direction is down.
  - e. If the *note above is farther from the middle line* than the note below, the stem goes down.
  - f. If the *note below is farther from the middle line*, the stem goes up.
  - g. When the *outer notes* (extreme top and bottom notes) are an *equal distance from the middle line* and the majority of notes are above the middle line, the stem goes down.
  - h. When the *outer notes* are an *equal distance from the middle line* and the majority of notes are below the middle line, the stem goes up.
6. CHORDS WITH THE INTERVAL OF A 2nd: The stem is always placed *between the two notes* of an interval of a 2nd, with the *upper note always to the right*--the lower note always to the left.
7. NOTES SHARING A STAFF: Notes have *opposite stem direction* when sharing a staff if the parts represent different melodic lines. Stems in the "wrong direction" will have shorter stems than normal.
8. TIES: Tie noteheads, *not* stems, away from the stems.

# Beams

Beams greatly simplify the reading of music, substituting for individual flags in groupings of notes smaller than a quarter note. Because of the ease in reading beams, the use of flags in vocal music--in relation to the lyric--has become obsolete.

1. **CONNECTION TO THE STEM:** Beams are connected to the side of the stem. They must be flush to the stem, both vertically and horizontally.
2. **PRIMARY AND SECONDARY BEAMS:** The beam that is farthest from the noteheads and connects a group of notes is called a **primary beam**. This beam remains unbroken throughout the grouping. Any beam other than the primary beam is a **secondary beam**. The secondary beam may be broken to divide the grouping into smaller units for easier reading.
3. **FRACTIONAL BEAMS:** A **fractional beam** is also a secondary beam, and is associated with only one note. The length of a fractional beam is the same as the width of a notehead, and is always placed *inside* the grouping, usually following or preceding a beamed, dotted note.

## Beaming and Meter

The basic purpose of a beam is to connect two or more notes within the same beat. Meter must be considered when grouping notes with a beam. In any simple meter, each beat is divisible by two; a beam may connect the two notes.

4. 2/4: Either beaming is permissible.
5. 3/4: Either beaming is permissible.
6. 4/4: Either beaming is permissible; however, do not connect the notes of beat two with the notes of beat three.

7. 6/8, 9/8, 12/8: When each pulse of the measure is divided into three parts, the meter is called *compound*. A beam indicates each triple grouping.
8. STEM DIRECTION OF BEAMED GROUPS:
  - (a) If both notes are the same distance from the middle line, the preference is for stems down.
  - (b, c) Stem direction is determined by the note *farthest* from the middle line.
9. MULTIPLE BEAMED NOTES: If the majority of the notes are *on or above* the middle line, the stems go down. If the majority of the notes are *below* the middle line, the stems are up.

## Accidentals

### 2 NOTES

1. Musical notation showing two notes on a staff with accidentals. The first note has a sharp and a flat, and the second note has a flat and a sharp.

2. Musical notation showing two notes on a staff with accidentals. The first note has a sharp and a flat, and the second note has a flat and a sharp.

3. Musical notation showing three notes on a staff with accidentals. The first note has a sharp and a flat, and the second note has a flat and a sharp.

4. Musical notation showing three notes on a staff with accidentals. The first note has a sharp and a flat, and the second note has a flat and a sharp.

5. Musical notation showing two notes on a staff with accidentals. The first note has a sharp and a flat, and the second note has a flat and a sharp.

6. Musical notation showing two notes on a staff with accidentals. The first note has a sharp and a flat, and the second note has a flat and a sharp.

1 align  
(middle) 3 highest  
&  
2 lowest

7. Musical notation showing two notes on a staff with accidentals. The first note has a sharp and a flat, and the second note has a flat and a sharp.

8. Musical notation showing two notes on a staff with accidentals. The first note has a sharp and a flat, and the second note has a flat and a sharp.

1. For intervals of a **2nd through a 6th**, place the *upper accidental closest to the note*, and the *lower accidental to the left*.
2. When intervals are **greater than a 6th**, accidentals align vertically.
3. For the **interval of a 6th**, if the two accidentals don't collide they may be aligned vertically.
4. When *outer notes* are a **6th or less**, the upper accidental is closest to the note, the lower accidental is placed left, and the middle accidental is placed farthest left.
5. When *outer notes* are **greater than a 6th**, *upper and lower accidentals are aligned closest to the notes--the middle accidental is placed to the left*.
6. **Accidentals for the 2nd** should usually be "**shaped like the 2nd**" (if the outer notes are greater than a 6th).
7. **Accidentals are always placed before the entire note structure.** (Do not place an accidental between notes that are played together, even if they are stemmed in opposite directions.)
8. This example is incorrect, since the natural is placed between notes.
